

Fjord Nansen

be wild at heart!

Fjord Nansen

be wild at heart!

Inspired by great journeys, driven by the desire to create unique things, motivated by our own ambitions and dreams, we wanted to create the most popular brand of outdoor equipment. In 1996, in Gdynia, the thought of creating our own brand sprouted in the hearts and minds of a group of adventurous people. This is how Fjord Nansen was born, and since then we have been working continuously to create durable, functional and fine-tuned products for you - products that we would like to use ourselves. We consistently achieve these goals based mainly on our own experience and on that of our Test Team, which consists of great enthusiasts of all physical activity. However, we believe that the biggest catalyst of the creative process are the suggestions and opinions of our users. We believe that your satisfaction is the measure of our success. We treat all users of our equipment as friends from the trail, so we always offer support in the form of spare parts or free material samples whenever needed.

Because there is wildness in every heart, you just need to release it. And we will help you do that!

Fjord Nansen Test Team

A few extraordinary people specializing in various tourist and sports activities, for whom our slogan Be wild at heart is in their blood. For our Test Team we try to select those who have this energy and are able to infect others with it. They put their trust in our brand and agreed to represent it on their trips. They are also the first to test our products and test them in field conditions. Meet our Test Team!

Olek Doba

As the only one in the world, he sailed the Atlantic in a kayak three times, alone, with his own muscle power. The third Atlantic expedition took place in 2017, when Olek was 71 years old! For his kayaking achievements he was awarded with many prizes, including: The Adventurer of the Year by National Geographic and Super Kolos (Super Giant). Olek is a true Renaissance man: glider, parachutist, cyclist, sailor and helmsman all in one. But his greatest love is kayaking. As an experienced traveller, he tests our outdoor equipment.

Piotr Suchenia

The first Pole to win the North Pole Marathon, and a year later the Antarctic Ice Marathon. He took part in many marathons in Bangkok, Berlin, Vienna, Frankfurt, Tromso, Majorca, Jamaica, among others, but he definitely prefers running in extreme conditions, e.g. on Spitsbergen (1st place in 2016). He is professionally involved in organizing sports events. For us he's testing thermoactive underwear.

Bartosz Czauderna

Multiple Polish Champion, bronze medallist of European Championships and World Cup in freestyle kayaking. He also does extreme kayaking. He organizes expeditions all over the world to row down the most difficult rivers. He loves all kinds of sports and travel, he is hyperactive, it is hard for him to sit in one place, and he enjoys spending his time on the water or doing other sports. For us, he tests water and tourist equipment.

FJORD NANSEN CREW

WE'RE NOT HERE BY ACCIDENT!

Each of us has sports- and tourism-related passions, which allows us to combine work with pleasure! We design things, which we then test ourselves, and only after positive results do they go into production and then to you! If you can get up at 5 a.m. to swim on storm waves e.g. in a kayak and then go to work at 10 a.m., then you have wildness in your heart - welcome to our team.

DAREK
OWNER AND BRAND FOUNDER, CEO

I have the pleasure of combining work with passion. A lot of my friends are jealous of that. And I don't blame them. - It's fun to make equipment and then test it. 90% of the equipment goes through me already at the testing stage. I use it in all my activities: Mountain Triathlon (Polish Team Champion), mountain kayaks (Polish Freestyle Amateur Canoeing Champion, 2018), mountain expeditions, lowland and sea kayaks, freeride, ski tour, biking...

Darek, brand founder, CEO on the waves.

JACEK
PRODUCTION DEPARTMENT

The broadly defined outdoor has always been part of my lifestyle. Extreme challenges and exceeding my own limits motivate me to set new sports goals. I devote the most of my energy to mountain biking, road cycling and off-road running. Bikepacking trips and adventure rallies fill up my calendar and I always follow the rule that the harder something is, the cooler it is.

TOMEK
POLISH SALES DEPARTMENT

I'm all about life on the run and in constant movement - it's a pleasure to be able to work in this form, especially since I've been with Fjord for many years. I cycle, I run, I pretend to climb a little. I've always liked spending time in the mountains and I go there whenever I can. And when I am far away from the mountains I go for walks in the Tricity forests.

PIOTR
PRODUCTION DEPARTMENT

Ever since birth, I've been involved in outdoor life - I can't imagine spending a long time without outdoor activities. I started with survival, just for fun, followed by rock climbing and orienteering, now I'm mainly interested in long-distance dog sledding and Adventure Racing.

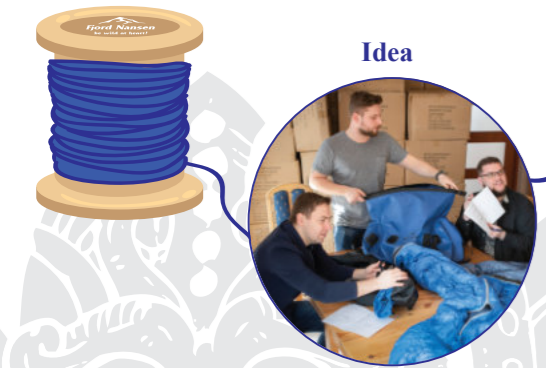

WOJTEK
INTERNATIONAL SALES DEPARTMENT

I'm a traveller, an adventurer, and a car enthusiast. Since I was a child, I have loved spending time outdoors experiencing all kinds of activities. Currently my main activities are hiking, cycling and beach volleyball. I'm a big fan of new technology and Formula 1. In the future I'm going to visit every continent in the world.

FROM CONCEPTION TO PRODUCTION

What happens before you get our product?
It's quite the journey!

Idea

An idea is usually born out of need, and the need arises from our experiences or your suggestions. As befits active souls, each of us has our own ideas and insights, which we acquire during our activities and which have a chance to transform from concept into a fully-fledged project. Before something goes into production, it must first be brainstormed. When we finally decide to take up the challenge, we start designing.

Drafting the project

Sketches, drawings, descriptions, projections and sections. The more, the more detailed, the better. Nothing is left to chance. All of that in order to best convey the idea. This package of information goes to the production plants of our contractors.

Choosing the materials

Every sketch needs the right materials. They largely determine whether the product will meet our high expectations. However, not every material meets our requirements. We always check it meticulously.

Prototyping

After a while, a test copy comes into our hands. Rarely does it happen to be perfect. It is at this stage that we catch any defects that may cause difficulties in use, so we subject all products to rigorous internal tests.

Internal testing

We take accurate measurements, check the strength limits and make sure they are far beyond normal use. If we are not satisfied with the results, the product returns to the production facilities for improvements. We repeat this process until the end - there is no room for compromise here.

External testing

When it seems that the product meets our expectations, we hand it over to our Test Team friends or travellers with whom we are associated. These are people we trust and we know they can test our ideas through the lens of their own experience, shedding new light on issues that may have escaped us in previous stages. We take all suggestions into account. This is the moment for detailed fine-tuning. We focus very much on the right dimensions and small things that can still be changed at this stage. And again, everything goes back to the machines one last time.

WE DID IT!

Finally, we get the final product and start production. In the meantime, tags, labels, photos and descriptions are also being created, i.e. the whole identification of the product, which is about to hit the shop shelves. And once you have it in your hands, the most crucial tests begin! Will it meet your expectations? The next chapter belongs to you! We're waiting for your opinions!

WE SUPPORT BEING WILD AT HEART

We try to make the idea of wildness in our hearts spread wherever possible! That is why we cooperate with many travellers and bloggers. They take our products to the furthest corners of the world and bring us opinions about their performance. They also take great pictures adorning many pages of this catalogue. Maybe they will be an inspiration for you as well!

Lostitalianos
Diana and Marcin - a Polish couple with a Colombian twist. Travelers, adventurers and photographers in love with road trips, mountain hiking and their cats. They visit various places, looking for authenticity in each of them. They are spending this year exploring the charms of hitchhiking in South America. Their goal is to inspire other people to travel.

Facebook: lostitalianos

Project Armenia
The idea for this expedition was born in Val Ismaili's mind during the trek through the Transcaucasian Trail in 2017. Fascinated by the beauty of the Dilijan Cliffs and their climbing potential, Val decided to organize an expedition whose goal was to designate and prepare the climbing area. In two years his passion allowed him to inspire eight climbers to take on this difficult task. Together for a month they cleaned the rock wall from loose stones, wild rose bushes, grasses and mosses, finally creating Bisetkor which consists of 22 roads, 20 sports and 2 traditional ones. The Polish part of the team was represented by Aleksandra Wierzbowska and Jan Kędzia.

If you want to, you can do it!
Natalie and Dominic - "If you want to, you can do it" - they came to this conclusion after Kolosy 2017, which turned their lives upside down. They set off on a journey under the motto: World on the Head! In 5 months they travelled 15,000 kilometres, from the Middle of the World in Ecuador to its symbolic end, in Argentina's Ushuaia. They proved that with a bit of stubbornness an ordinary Nowak and an average Walicki can do it too! What's more, they're moving on to Asia this time! (and taking us with them :-) Facebook: bochiectomoc

ByleDoWakacji
The travelling family from byledowakacje.com shows that travelling with children is not only not that difficult but also a great adventure. They have visited dozens of countries around the world so far, swam with sharks in the Philippines, ate ants in Colombia and slept under the starry sky of Namibia. A good example of turning dreams into goals and making them come true. You can meet them at: facebook.pl/byledowakacijblog and www.byledowakacji.com

Love - Krowe
Karolina travels with her husband Arek and their Pug Toudi. Searching for wild places is their family specialty! They sleep in a tent in winter, explore the world by canoe and constantly try new means of transport. Dreaming of campervan trips, they converted their car into a sleeper minivan. They love long expeditions, but they also show that sometimes you don't have to cross the border to experience a great adventure!
Facebook: lovekrowe.naszepodroze

Places2visit
They love travelling. They spend their time actively in the open air whenever possible and can't sit still for long. Camping is their second home. They want to show children not only the beauty of our world, but also to teach them to spend time safely away from home. For them, traveling is a break from everyday life. For travel inspirations, please visit their blog.
Facebook: places2visit

IMPROVING?

We only close the production cycle temporarily. We know from experience that necessity is the mother of invention, and not all clever solutions can be designed on a piece of paper. That's why we appreciate the impressions and opinions of our customers from their trips into the unknown. If you're already using some of our equipment and you want it to be even better, let us know! Thanks to such remarks we repeatedly introduce soft innovations to our products, making them better and better. On the basis of such cooperation with a client known as PTB, an excellent Tordis II PTB tent was created. It may turn out that it is thanks to you that future models will become even better!

FJORD NANSEN TENTS

The tent is as good as its weakest element, which is why in our tents we use frames made of high-quality, full-value metal alloys. As confirmed by independent tests carried out at the CBO at Univ. Leed, the tents are highly susceptible to the destructive effects of UV radiation. Studies show that the water resistance of some flysheets decreases by more than 50%, and with some materials the drop can reach 90%. With this in

mind, our tents use only tested materials with reduced susceptibility to UV rays, so they are not so exposed to the loss of waterproofing. Many of our tents have been tested on long journeys. Like, for example, on a 100-day lonely bicycle trip along South America. Where it was set up every day in different places: from Atacama to the windy areas of Patagonia or Tierra del Fuego.

OUR TENTS ARE:

Waterproof - from 3000 mm to 6000 mm water column depending on the collection.

Durable - They are made of materials with increased resistance to sunlight, and tents from the Profi collection are additionally tear resistant.

Lightweight - With the possibility of setting up the canopy or the flysheet alone in some models you can reduce the weight by up to 30%.

Set up in the rain - Tents with an external frame (and Tromvik) will keep your canopy from getting wet when setting up in the rain.

Well ventilated - The canopy is made of breathable material. The tents also have appropriately reinforced, adjustable ventilation windows. An extra mosquito net in the entrance.

Engineered down to the smallest detail - Velcro and rubber are sewn to the flysheet using spacers. The seams and the zipper in the vestibule were glued - a modern solution used so far only in expedition tents. The tents are equipped with guyline tensioning systems.

Our tents have:

Snow flaps - Veig Pro tents are equipped with special snow flaps which offer additional protection against the snow getting under the flysheet when camping in winter.

Duralumin stakes - Ultralight and Profi collections - 2.5 times lighter than steel stakes and more resistant to bending.

Additional reinforcements - All areas particularly at risk of damage, like corners of the flysheet and the floor, are additionally protected.

Repair kits - All tents come with spare material patches of all fabrics used in production, to allow for quick mending of any small holes or damage sustained by the tent.

24 month warranty

Photo by Krzysztof Grabowski

SPARE PARTS

You don't leave friends from the trails in times of need. You don't have to buy a new tent when the old one gets torn up. Ask about spare parts. More info at www.fjordnansen.pl

ULTRALIGHT TENTS

Ultralight tents created especially for the most demanding travellers, for whom every gram of luggage matters. They are made of the highest quality materials. Already at the design stage, we have focused on low weight and high mechanical resistance.

MATERIALS USED IN THE ULTRA LIGHT COLLECTION

Flysheet: 15D ripstop nylon, PU coated, waterproofing: 3000 mm water column waterproof, silicone coated on the outside
Canopy: 30D breathable ripstop nylon
Floor: 70D ripstop nylon, PU coated, waterproofing: 6000 mm water column waterproof
Frame: T6 7001 high quality duralumin
Stakes: Y-shaped, duralumin

DCS SYSTEM DOUBLE COMFORT SPACE SYSTEM

- classic igloo
- double comfort space

DCS is a special tent frame profiling system. It allows to create an effect of almost vertical side walls. Tents with DCS will accommodate more people in a seated position and also minimize the risk of tent walls being touched by tall people lying in the tent. Our measurements have shown that the "usable area" in this type of tent is over 3.5 times larger than in a standard igloo*.

*In comparison with Veig Pro II tent. The usable area is the space in which people with a height of 180 cm can remain seated.

FAST & LIGHT

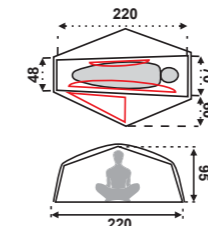

The fast & light formula was created for true travel enthusiasts. Heavy luggage is often a restriction for hikers, cyclists or skiers. To address this problem, we have created a line of ULTRALIGHT products, slimmed down from unnecessary weight, made of the most durable materials. We have carefully selected our products to meet the needs of those who count every gram of their luggage and do not accept any compromise.

ULTRALIGHT products are marked in the catalogue with a special sign - Fast & Light.

TROMVIK I NGZ

Number of people: 1
Entrances: 1
Vestibules: 2
Total weight: 1.6 kg
Canopy height: 95 cm
Dimensions when folded: 43 cm / 11 cm

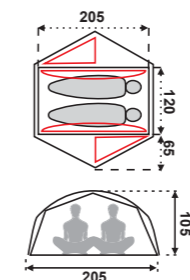

Tromvik I and II are the lightest and most packable tents in our collection. They are made in the DCS system, based on the construction of the 2Y frame, which makes it possible to pitch it in three different ways: the canopy itself, the flysheet itself or the canopy and the flysheet. In addition, it can be set up during the rain to avoid getting the canopy wet.

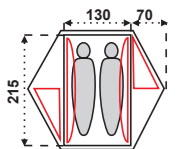

TROMVIK II NG

Number of people: 2
Entrances: 2
Vestibules: 2
Total weight: 2.5 kg
Canopy height: 105 cm
Dimensions when folded: 47 cm / 14 cm

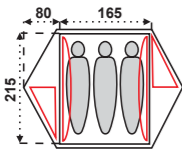

ULTRALIGHT TENTS

REKVIK III NG
 Number of people: 2
 Number of entrances: 2
 Vestibules: 2
 Canopy height: 100 cm
 Frame type: external
 Total weight: 2.25 kg

REKVIK III NG
 Number of people: 2-3
 Number of entrances: 2
 Vestibules: 2
 Canopy height: 110 cm
 Frame type: external
 Total weight: 2.5 kg

Ultralight, simple and quick to set up. An improved version of Veig from the Profi collection. Compared to Tromvik, it is more resistant to wind, but this is achieved at the expense of comfort. It can be easily pitched in the rain without getting the canopy wet. You can also set up just the flysheet.

FRAME ANODISED DURALUMIN 7001 T6 (PROFI COLLECTION)

Currently one of the best tent frames available. Compared to type 6000 alloys, it is twice as strong. Note T6 specifies the level of flexibility. We chose the most optimal one (T1 being very flexible, and T10 very hard). This type of frame, apart from being lightweight, is very easy to set up. Just spread it out and shake the tip vigorously to get the pole ready.

TENTS PROFI

The Profi series tents are designed for demanding travellers who appreciate the durability of design at the expense of a slightly increased weight. Ideal for short trips to the forest, but also serious, demanding expeditions.

TORDIS I

Extra comfortable single tent using the DCS system. Two vestibules (the second one accessible through an additional flap in the canopy).

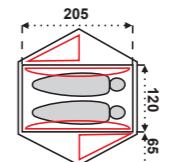

Canopy: entirely mesh
 Number of people: 1
 Entrances: 1
 Vestibules: 2
 Weight: 1.9 kg
 Canopy height: 95 cm
 Dimensions when folded: 48 cm / 18 cm

TORDIS II PTB

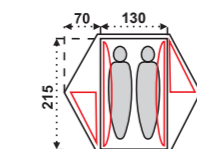

The latest generation 2-person tent, offering incredible comfort and a very good weight, with two entrances. Model inspired by the remarks made by Tomek (PTB) on outdoor.org.pl forum.

Number of people: 2
 Entrances: 2
 Vestibules: 2
 Weight: 2.6 kg (including spare stakes)
 Canopy height: 105 cm
 Dimensions when folded: 60 cm / 15 cm

VEIG II

Number of people: 2
 Entrances: 2
 Vestibules: 2
 Total weight: 2.8 kg
 Canopy height: 100 cm
 Dimensions when folded: 50 cm / 20 cm

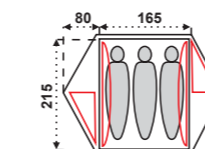

The most versatile tent. Very spacious canopy, two additional vestibules for extra luggage. Quick and easy to set up.

VEIG PRO III

Number of people: 2-3
 Entrances: 2
 Vestibules: 2
 Weight: 3.3 kg
 Canopy height: 110 cm
 Dimensions when folded: 50 cm / 20 cm

MATERIALS USED IN THE PROFI COLLECTION

Flysheet: 68D ripstop polyester, PU coated, 5000 mm water column waterproof
Canopy: 68D ripstop polyester
Floor: 70D nylon, PU coated, 6000 mm water column waterproof
Frame: T6 7001 duralumin
Stakes: duralumin

Possibility of setting up the Profi series tents even during rain. Pitch just the flysheet, saving up to 30% of the weight.

TargiKielce WYRÓŻNIENIE In the "technologically innovative products" category.

OUTDOOR TENTS

The outdoor series is geared toward those who, first and foremost, look for a solid and dependable shelter at a reasonable price. These are our classic bestsellers, made of very durable and tested high-quality materials.

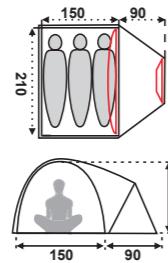

MATERIALS USED IN THE OUTDOOR COLLECTION

Flysheet: PU polyester, 3000 mm water column waterproof
Canopy: polyester
Floor: polyethylene
Frame: fibreglass
Stakes: steel

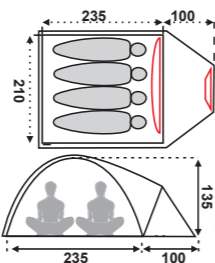

ANDY III

Number of people: 2-3
 Entrances: 1
 Vestibules: 1
 Weight: 4.0 kg
 Canopy height: 125 cm
 Dimensions when folded: 55 cm / 20 cm

ANDY IV

Number of people: 3-4
 Entrances: 1
 Vestibules: 1
 Weight: 5.15 kg
 Canopy height: 135 cm
 Dimensions when folded: 55 cm / 20 cm

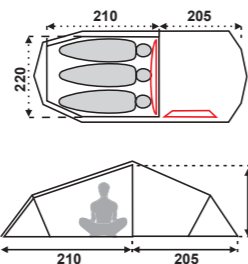

A family camping tent in igloo shape with a very spacious canopy and a practical vestibule.

KORSYKA III COMPACT

Number of people: 3
 Number of entrances: 2
 Vestibules: 1
 Maximal height inside canopy: 115 cm
 Frame type: external
 Total weight: 4.95 kg
 Dimensions when folded: 48 cm / 18 cm

A tunnel tent with a spacious vestibule, where you can organize a field kitchen or keep your tourist equipment even during prolonged bad weather conditions.

I tested a pre-production Heimdall model. It is ideal for people who already have a small, lightweight tent, but sometimes go on a car trip or use the tent as a base and a more spacious solution becomes valuable for them. The obtained surface allows even to set up small camping furniture or create a place for cooking. It works well, for example, during a canoeing trip.

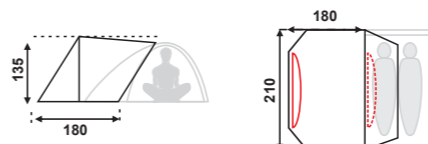

Darek Staniszewski

HEIMDALL

Weight: 1.7 kg
 Frame type: external, fibreglass;

HEIMDALL ALU

Lighter version with an aluminum frame.
 Weight: 1.5 kg
 Frame type: external, duralumin.
 Height: 135 cm

A new addition to the Fjord Nansen tent collection!

A smart, multifunctional vestibule-tent. Can be used in two ways. The attachable vestibule for other tents makes it easy to enlarge the covered space at the entrance. It is a perfect match with Lima II, Sierra II, Veig II, Rekvik II models. Heimdall can also function as a tent in itself. This is a tent without a floor, but you can buy it separately. Although it was designed for two-person models, our independent testers have also successfully used it in combination with the three-person versions and Tromvik and Tordis, but this combination does not provide 100% integrity.

KRAFIA

Tent floor
 130 x 215 cm
 165 x 215 cm
 240 x 240 cm

OUTDOOR TENTS

It's possible to set up the Outdoor series tents even during rain (except Andy). Pitch just the flysheet, saving up to 30% of the weight.

LIMA II

Number of people: 2
Entrances: 1 Vestibules: 1
Weight: 3.15 kg
Canopy height: 100 cm
Dimensions when folded: 45 cm / 20 cm

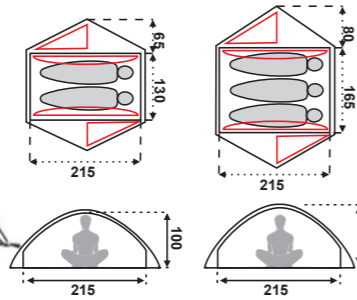

Our basic tent. Equipped with a durable fibreglass frame. Perfect for those just starting their adventure with tourism.

SIERRA II COMFORT

Number of people: 2
Number of entrances: 2
Vestibules: 2
Canopy height: 100 cm
Frame type: external
Weight: 3.55 kg
Dimensions when folded: 45 cm / 20 cm

Sierra Comfort is a modernised version of the older Sierra. Thanks to a special construction (raising the frames to the vertical position in the lower part) we gain about 15% more space inside compared to the previous version. More comfort for sleeping and staying in!

SIERRA III COMFORT

Number of people: 3
Number of entrances: 2
Vestibules: 2
Canopy height: 110 cm
Frame type: external
Weight: 4.2 kg
Dimensions when folded: 50 cm / 20 cm

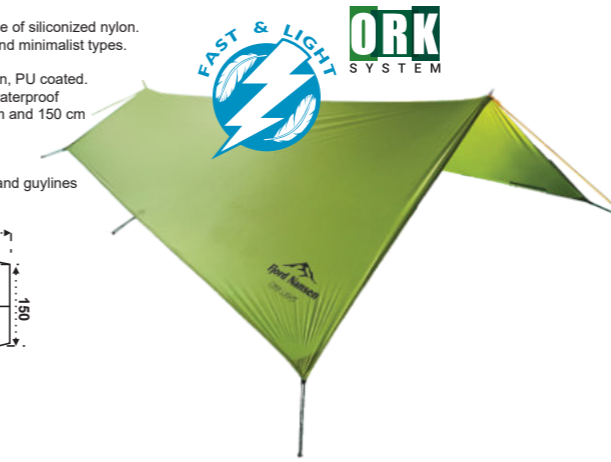

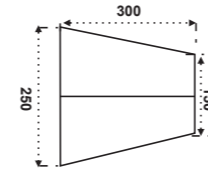

TARPS

ORK LIGHT NG

Ultra-lightweight tarp made of siliconized nylon. Created for the creative and minimalist types.

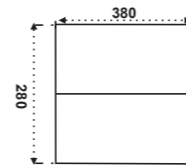

Material: 15D ripstop nylon, PU coated.
3000 mm water column waterproof
Size: Trapeze with 250 cm and 150 cm bases and 300 cm sides
Tarp slope angle 10°
Weight: 475 g
The set contains: stakes and guylines

ORK II

The roof is made of durable polyester, on a rectangular plan. 19 ribbons are sewn in along all sides, prepared for guylines. Thanks to them, the tarp can be spread out in many ways, e.g. full length, 2/3 of its length or as a tarp in an approximate cuboid shape.

Material: PU coated polyester 3000 mm water column waterproof
The set contains: 10 stakes, repair patches and 4 guylines
Weight: 1.05 kg
Possibility of purchasing additional poles

ORK LINER

Number of people: 1
Number of entrances: 1
Weight: 425 g

Ultra-lightweight shelter for one person made of nylon and mesh. Designed especially for travellers conscious of the weight of their luggage. When folded, it takes up little more space than a 0.5 litre bottle and weighs only 425 g. It fits perfectly under the Ork Light NG roof, but also under most others available on the market. A special tension and traction system makes it possible to set up the Liner with one stationary lashing point (it can be a tree, a pole or a walking stick).

Camping set Fast'n'Light

- + Ork Light tarp 0,475 kg
- + Canopy Ork Liner 0,425 kg
- + Trekker NG mat 0,4 kg
- + Nordkapp Hydro 250 sleeping bag 0,6 kg
- = 1,95 kg portable house

FAMILY TENTS

MATERIALS USED IN THE FAMILY COLLECTION

Flysheet: PU coated polyester 3000 mm water column waterproof
 Canopy: polyester
Floor: polyethylene
Poles: fibreglass
Stakes: steel

HANGAR NG

Camping tent / camping tarp
 Number of people: 6-8
 Number of entrances: 4
 Height: 240 cm
 Frame type: external
 Weight: 11.3 kg
 Dimensions: 4 m x 4 m

In each door the top part can be removed/built-in mosquito net. Detachable door. A mighty camping tent that can serve as a simple roof. Four fully openable walls with window-shaped ventilation on top of the door.

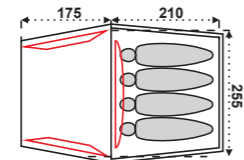

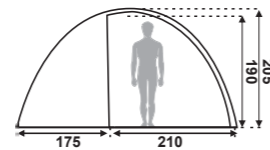

CONNECTOR

Connector for Hangar NG / additional tarp
 Weight: 2.75 kg
 Material: polyester / fibreglass
 Height: 2 m
 Distance between HANGARS NG: 75 cm

MALAGA IV

Number of people: 3-4
 Entrances: 2
 Vestibules: 1
 Weight: 9.3 kg
 Canopy height: 195 cm
 Vestibule height: 205 cm
 Vestibule floor included.
 Dimensions when folded: 65 cm / 27 cm

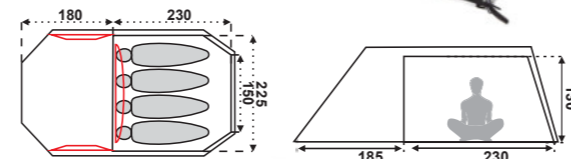

A perfect family tent. If you travel with your family and are looking for comfort on the campsite, there is no better choice for you. A high and spacious canopy can easily accommodate an inflatable mattress. A covered vestibule with attachable flooring is an ideal place for a table and drinking morning coffee, even in the rain. It also easily fits a set of bicycles.

KORSYKA IV

Number of people: 4
 Number of entrances: 2
 Vestibules: 1
 Canopies: 1
 Canopy height: 130 cm
 Frame type: external
 Total weight: 8 kg
 A spacious family tunnel tent for four people.

SLEEPING BAGS

HOOD - it wraps your head and protects you from losing heat. It has an adjustable cinch cord.

SHAPE - A sleeping bag better tailored to the human body is a warmer sleeping bag, which is why Fjord Nansen offers mummy-shaped sleeping bags. The traditional form of the "envelope" is convenient in shelter or camping conditions.

DRAFT TUBE - Additional material insert filled with thermal insulation, runs along the lock and performs two tasks. It prevents air circulation and faster cooling of the sleeping bag in the zipper area. Together with the hard material insert, it forms the Anti Bite System, which prevents the material from cutting into the zipper, avoiding problems with fastening.

ZIPPER - In our sleeping bags, we use zippers sliding from the top and bottom, which makes it easier to regulate the temperature inside the sleeping bag. In the Profi Synthetic and Stretch series, we have used YKK zippers, so when choosing a sleeping bag with a right and left lock, you can combine them to form a 2-person sleeping bag.

DRAFT COLLAR (shoulder line) - Particularly useful in colder conditions. Adjustable cinch cord prevents the entry of cold air and protects against heat loss.

FILL - synthetic. Synthetic sleeping bags are filled with microfibre of excellent elasticity and resistance. They retain their thermo-insulating properties even in increased humidity. They are easy to keep clean.

INTERNAL MATERIAL - Depending on the intended use, the models contain synthetic fibre admixtures in various proportions. They ensure rapid transport of moisture to the outside, while maintaining comfort in contact with the body.

EXTRAS:
A LITTLE POCKET - it was placed inside the sleeping bag so that you can put all your precious things in it.
SLEEPING BAG EDGE - is additionally fastened with Velcro, so it does not come apart at night.

TWO LOOPS - on the outside, for hanging the sleeping bag up.

24 MONTH WARRANTY

When choosing the right model of sleeping bag it is necessary to determine its purpose. Another important factor is our personal reaction to the cold, whether we like colder conditions or are rather sensitive to them. In addition, factors such as fatigue, hunger, malaise, prior hypothermia, age, metabolism and body fat content have an impact on the way we feel cold. In most cases, we recommend choosing a slightly warmer model than we assume. It is always more comfortable to undo our sleeping bag than to sleep in a thick sweatshirt or a jacket.

CLIMATE CHAMBER TESTING

Some of our sleeping bags have been tested in accordance with European standard PN-EN 13537-2004 in order to determine their thermal properties. The research was conducted in the Weiss climate chamber at the advanced 16 component DIANA test dummy. In this way we have determined the comfort temperatures, T max, T lim, T min for each model. The temperatures indicated in the study refer to the temperatures experienced by a typical female and a typical male after moderate physical effort.

TEMPERATURE RANGE ACCORDING TO EN 13537

Upper comfort limit (T max) - the temperature at which a "typical male" does not sweat and the excessive temperature does not disturb his sleep.

Comfort (T comf) - the temperature at which a person is in thermal equilibrium and does not feel cold. This value refers to the average woman after a meal and after moderate effort. This is the parameter that women should follow when choosing a sleeping bag.

Limit temperature (T lim) - the lowest temperature at which a "typical male" can sleep comfortably. This is the parameter that men should follow when choosing a sleeping bag.

Extreme temperature (T min) - exceeding this value causes the risk of hypothermia and is indicative of conditions in which one can survive for a maximum of six hours (parameter based on the feelings of an "average woman"). We shouldn't be focusing on this temperature when buying a sleeping bag!

DOWN SLEEPING BAGS

NORDKAPP 300/500
External material: 20D Nylon
Internal material: 20D Nylon
Filling: Polish white duck down, elasticity 675 cuin.
 Ratio of down to feathers 91/9

*Size XL - length: 225 cm, foot box width: 35 cm appropriate for max 195 cm height.
 Size MID - length: 198 cm, foot box width: 30 cm appropriate for max 178 cm height.
 **Sleeping bag weight stated without stuff sack in accordance with PN-EN 13537:2004

FOOT BOX

In the Nordkapp 300 and Nordkapp Hydro 250 models we used an innovative construction of the bottom part of the sleeping bag - an openable foot box. Thanks to this solution you will be able to walk without any problems without leaving your sleeping bag, but also to ventilate it quickly or just lower the temperature inside.

In the Nordkapp 500 and Nordkapp Hydro 400 models, the foot box is normally closed for maximum protection at low temperatures.

HYDROPHOBIC DOWN

Wet down loses its elasticity and thus its thermal insulation properties. Thanks to a special impregnation process before filling the sleeping bags, we obtain Hydrophobic Down. It is characterized by much higher parameters of moisture resistance. Hydrophobic down absorbs significantly less water, and when wet retains its elasticity for longer. It also dries faster, thus keeping the high temperature inside much more effectively. Importantly, just like down, it doesn't lose these properties after washing.

PROFI LINER and CAMPING LINER

Comfortable and hygienic lining for a tourist sleeping bag.
 Material: polycotton
 Size: one size
 They have a space to insert the pillow and a slight opening on the side for easy entry.

STRETCH SLEEPING BAGS PROFI SYNTHETIC STRETCH

External material: Poly Ripstop
Internal material: Nylon Fill: Microfill Super-Therm
Zipper: YKK, two-way + AntiBite System
Draft tube: along the zipper and the hood
Internal pocket
Hood: profiled, adjustable
Compression bag: included

STRETCH SLEEPING BAGS

Sleeping bags that stay close to the body provide better thermal comfort. Stretch sleeping bags combine the right thermal comfort with the flexibility of choosing your sleeping position. Tokk and Target can increase their width by up to 60% from 50 to 80 cm (in the upper part), improving the quality of your sleep after a hard day's travel.

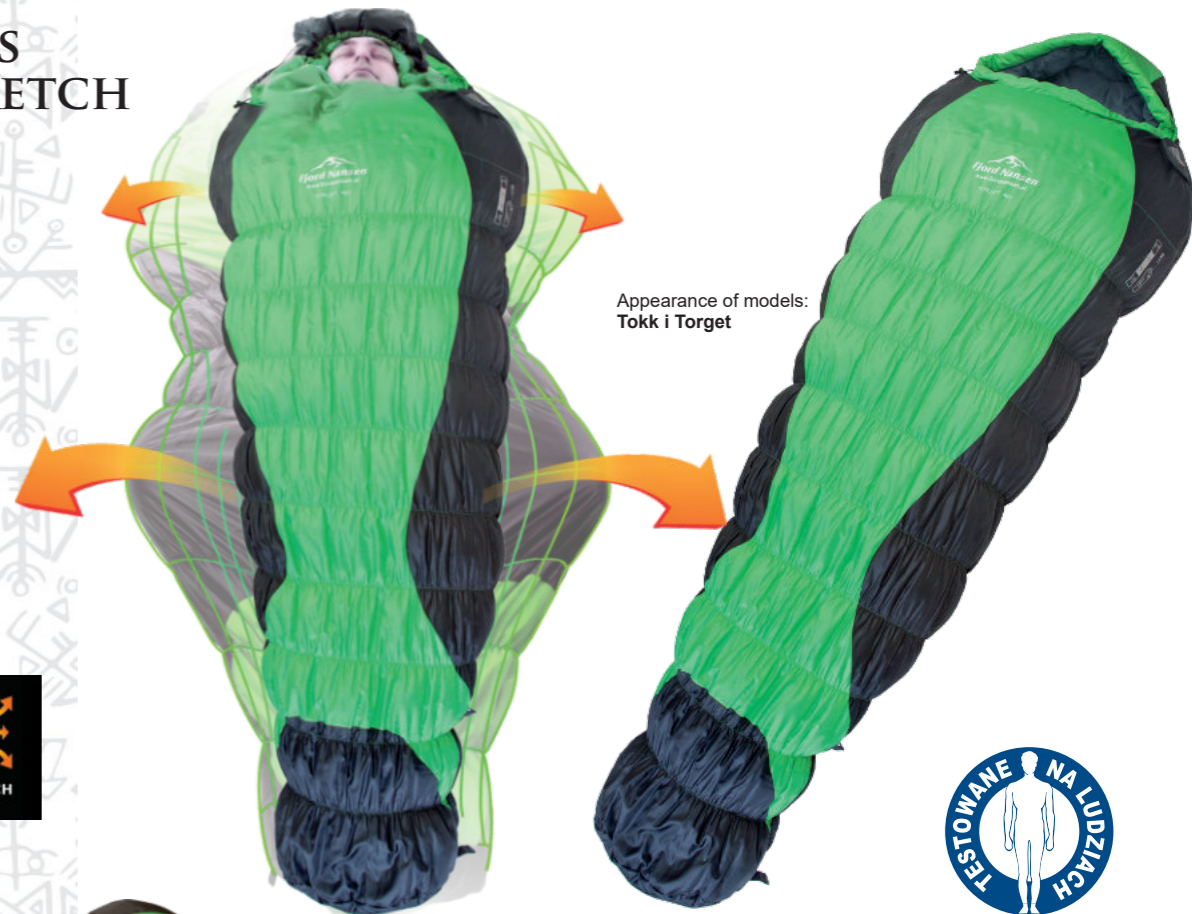

3D STRETCH

We proudly present a line of stretch sleeping bags. It stays snug and warm while providing comfort in any position you may assume while sleeping. If you toss and turn at night and you couldn't sleep at night because of it, this series is perfect for you. The sleeping bags are a combination of new functionality and the proven and improved over the years Microfill Super-Therm filling.

MICROFILL SUPER-THERM

It is currently one of the best non-woven fabrics in synthetic sleeping bags with a complicated structure. The unique construction of microfibres provides high resilience and insulation at low weight. Extremely thin fibres undergo special treatment and are then combined into a soft and light insulation layer. The non-woven fabric retains high elasticity parameters even after many washings.

SLEEPING BAGS PROFI SYNTHETIC

The whole Profi Synthetic series (including Stretch) is for those who want a very universal sleeping bag. Thanks to the synthetic filling (MICROfill Super-Therm), these sleeping bags can be used even in damp conditions. If you are serious about tourism and you expect reliability and durability from a sleeping bag, this series is just for you.

Internal material: Nylon
Fill: Microfill Super-Therm
Zipper: Two-way YKK +Anti-Bite System
Draft tube: along the zipper and the hood
Internal pocket
Hood: profiled, adjustable
Draft collar (Trondeland, Troms)
Insulated foot box (Trondeland)
Compression bag: included

10 LAUNDRY CYCLES TEST

Sleeping in a dirty and stinking sleeping bag is by no means pleasant. We know that there's always a dilemma, to wash or not to wash? That's why we did a 10-wash test for you to check the durability of the filling. Clumping, material displacement and thermal stability during and at the end of the test have exceeded our expectations, and MICROFILL Super-Therm has not changed its thickness and elasticity.

GOOD CHOICE

The TROMS sleeping bag was awarded the "Good Choice" title by the tourist magazine PODRÓZE. The prize is awarded to very good products whose price goes hand in hand with quality. The entire Profi Synthetic series is based on the same filling quality and material.

Bivak

Appearance of models:
Stavoy i Floro

SELF-INFLATING MATS

Self-inflating mats are a proven and convenient solution when travelling. Thanks to filling with air and special foam, they take up little space after folding. Definitely less than classic carimats. The use of special valves allows you to easily and quickly unfold and inflate the mat.

HIKING NG

Material: polyester, TPU coated
Dimensions: 196 x 63 x 5 cm
Dimensions when folded: 63 x 15 cm
Weight: 1.85 kg
Minimal usage temperature: -15°C
R-Value: 4.5

TREKKING NG

Material: polyester, TPU coated
Dimensions: 183 x 51 x 2 cm
Dimensions when folded: 51 x 10 cm or 29 x 13 cm
Weight: 0.8 kg
Minimal usage temperature: -5°C
R-Value: 2.2

EXPERT ADVICE

The thicker the mat, the warmer and more comfortable it is. The foam inside the mat expands and draws in air during unfolding. Finally, you just need to blow 2-3 times and screw the cap on. We suggest not pumping it up to the end, as it will stiffen under your weight increasing your comfort. We have included a repair kit.

KERJAG

Material: polyester, TPU coated
Dimensions: 183 x 51 x 3.5 cm
Dimensions when folded: 26 x 16.5 cm
Weight: 0.8 kg
Minimal usage temperature: -3°C
R-Value: 2.6

ENMO LIGHT

Material: polyester, TPU coated
Dimensions: 181 x 50/20 x 2.5 cm
Dimensions when folded: 27 x 13 cm
Weight: 0.57 kg
Minimal usage temperature: +2°C
R-Value: 2.2

TREKKER NG

Dimensions: 188 x 88 x 5 cm
Dimensions when folded: 14 x 10 cm
Weight: 0.4 kg
Material: 20D nylon

An ultra-lightweight inflatable mat made of durable 20D Nylon with a tactile texture.

TREKKER CAMPING

Dimensions: 183 x 51 x 9 cm
Dimensions when folded: 23x10 cm
Weight: 0.65 kg
Material: 75D polyester
R-Value: 2.2

Comfortable inflatable mat. Perfect for those who appreciate comfort. The second most compact mat in our collection, and one of the most comfortable. It takes up little more space than a half-litre canteen.

MARAK

Carimat sack.
size L: 57 x 18 cm
weight: 30 g
size XL: 75 x 20 cm
weight: 40 g

TREKKING POLES

TREKKING POLES

They improve the pace of the march, relieve strain on the knees and prevent falls. We have been creating our trekking poles for 15 years, using one of the best external fasteners on the market for easy adjustment. We were the first in Europe to introduce Click System II, which performs even in the most difficult conditions. Frosty or rain - it's practically infallible. With poles with an external locking mechanism, there is no need to replace components that wear out, as in poles with an internal lock. So you can use them longer without worrying that they will wear out. Over the years, we regularly test our poles and introduce small innovative changes, improving their parameters. Fjord Nansen's trekking poles are made from components supplied only by verified suppliers.

CLICK SYSTEM II

- Easy to use and incredibly effective.
- Facilitates rapid changes in length as required.
- Twice less susceptible to accidental folding than other systems on the market. Even in rain or cold.
- Trivial in maintenance.
- Adjustable clamping force by tightening the nut.
- Used in all models.

SPARE PARTS

Possibility of buying spare parts separately.

Since we do not want to leave our customers in need, our offer also includes accessories and spare parts for most products, including: tents, poles, thermos and many others. Check at www.fjordnansen.pl

EXPERT ADVICE

If you are a recreational tourist, you can choose models with duralumin 6061. However, if trekking is your passion and you expect maximum strength, then the only right choice is 7075 alloy (twice as strong as the first one). For those who expect maximum comfort in summer we recommend models with neoprene foam grip. This material is more pleasant to hold and reduces the slippage of sweaty hands. In all of our poles we use only the original widia, which is about twenty times less susceptible to slippage than other tips.

Darek - Product Manager

(I had the opportunity to test poles made by 12 different companies :-))

NIVA

Our lightest model. The N-POLE design allows for quick folding and unfolding. They are light and small when folded.
- Material: 7075 duralumin
- Grip: all neoprene foam, rounded top; with gently padded tape;
- External locking system combined with folding like an avalanche probe
- Length: min.: 34 cm; max: 110-130 cm
- Weight: 440 g
Packed in a lightweight bag.

IRON II GRIP

Our most reliable and resilient model. Made of Duralumin 7075, they will survive any test and will support you in any situation.
- Material: 7075 Duralumin
- Long foam grip
- External locking system
- Adjustable, comfortable wrist straps
- Baskets
- Length: min.: 62 cm; max: 145 cm
- Weight: 550 g

BACKCOUNTRY

2-part pole model. They can be used for trekking as well as for cross-country or backcountry skis and that was the idea behind their creation.
- Material: 7075 duralumin
- Grip: neoprene foam, long; with gently padded tape;
- External locking system
- Length: min.: 84 cm; max: 145 cm
- Weight: 530 g

NORDIC PRO II

Light two-element poles for Nordic Walking.
- Material: 6061 Duralumin
- Grip: PVC, rubber.
- External locking system
- Adjustable, comfortable wrist straps with moulded hand pads
- Baskets
- Length: min.: 86 cm; max: 147 cm
- Weight: 540 g

GRAVEL

Classic trekking poles, ideal for those starting their adventure.
- Material: 6061 Duralumin
- PVC grip
- External locking system
- Adjustable, comfortable wrist straps
- Baskets
- Length: min.: 62 cm; max: 135 cm
- Weight: 584 g

TRANSPORT BACKPACKS

Designed for multi-day expeditions, adapted to carrying an above-average weight on the back. Designed to minimise the load on the arms as much as possible.

Photo by Marta Czwordon

BACKBONE PILLOW SYSTEM

Support system based on a lightweight outer frame - 2 rails. The harness height adjustment with a strap allows you to adjust the backpack to your height.

OXFORD POLIESTER

It is a densely woven, durable fabric used in places particularly susceptible to abrasion, such as the bottom of the backpack.

SPECIAL PRO SYSTEM

The load-bearing system is designed for shorter people, perfectly suited for women. Fully regulated. Equipped with shorter harness and hip belt.

INSULAR MAPPING SYSTEM

Convenient load-bearing system in the form of a system of several sponge islets, which provide ventilation to the back and distribute the weight easily on the back. The system is additionally stiffened with two strips.

SPONGE MAPPING SYSTEM

A classic support system consisting of sponge surfaces with mini-insets, padded with mesh. It is lightweight, takes up very little space, and the back ventilation is provided by the air flow in the mini-channels between the pads.

RAINCOVER

Rain cover

HYDRATION system

Compatible with the hydration system.

NANGA PARBAT 85+10 SOLID

Colour: black/graphite
Weight: 3300 g

Very big expedition backpack, actually 2 backpacks in 1. Perfect for a long trip, on which sometimes a small backpack for a hike also comes in handy.

- adjustable support system **BACKBONE PILLOW SYSTEM**
- hip belt and sternum strap
- two connectable compartments
- access to the backpack from below
- detachable small backpack (5l) adapted to the Hydration system
- elastic band in front of the small rucksack
- two gill pockets at the sides
- two mesh side pockets
- flat pocket inside the backpack
- adjustable zippered flap with a clip hook for keys
- compression straps with buckle (2 per side)
- two small gear loops
- grommets on the flap for strapping
- double-fold top
- two comfortable haul handles
- compression straps under the bottom
- ice axe loops
- main compartment strap

HIMIL 70+10 SOLID

Colour: black/graphite, lagoon/black
Weight: 2160 g

- Universal trekking backpack for longer trips.
- Adjustable **SPECIAL PRO SUPPORT SYSTEM**
- hip belt with pockets and sternum strap
- easy hip belt tightening system
- front access to the backpack
- two gill pockets at the sides
- two flat pockets inside the backpack
- adjustable flap with 2 pockets (internal and external)
- compression straps with buckle (2 per side)
- front compartment made of expandable mesh
- rubber band on top of the flap
- double-fold top
- haul handle
- compression straps under the bottom
- ice axe loops
- main compartment strap

HIMIL 60+10 SOLID

Colour: red/black, spring power/black
Weight: 2100 g

HIMIL 45+10 SOLID

Colour: black/graphite, lagoon/black
Weight: 2150 g

Available also in:

PLECAKI TECHNICZNE

Czyli typowe, wielozadaniowce. Łączą ze sobą przemyślane rozwiązania dostosowane do dobrego rozkładania obciążenia wprost z plecaków transportowych, razem z mniejszym litrażem z kolekcji turystycznej.

Fot. Marta Czwordon

VIGDA 50+10 SOLID

Colour: lagoon/black
Weight: 1800 g

The perfect backpack for short people.

- Adjustable **SPECIAL PRO SUPPORT SYSTEM**
- hip belt with a pocket and sternum strap
- hip belt with pockets and sternum strap
- easy hip belt tightening system
- front access to the backpack
- two gill pockets at the sides
- flat pocket inside the backpack
- adjustable flap with 2 pockets (internal and external)
- compression straps with buckle (2 per side)
- front compartment made of expandable mesh
- rubber band on top of the flap
- double-fold top
- haul handle
- compression straps under the bottom
- ice axe loops
- main compartment strap

BODO 40

Colour: black/black,
spring power/black
Weight: 1240 g

BODO 32

Colour: lagoon/black,
red/black
Weight: 1100 g

An incredibly lightweight series of rucksacks, designed for the most demanding users.

- comfortable and breathable **INSULAR MAPPING SYSTEM**
- adapted to the Hydration system
- hip belt with a pocket and sternum strap
- front access to the backpack
- flat pocket inside the backpack
- adjustable zippered flap with a clip hook for keys
- front compartment made of expandable mesh
- two mesh side pockets
- compression straps with buckle (2 per side)
- foldable top
- haul handle
- straps with buckles at the bottom of the backpack
- double ice axe or walking stick attachment system
- main compartment strap

THOUGHTFUL DETAILS - HIPBELT

In Fjord Nansen we know that the equipment is as good as its weakest part. That's why we design and test every single component of our backpacks with equal care - from the support system to the buckles. The hip belt used in a good backpack must be both soft to provide comfort and rigid to carry the weight from the shoulders. In the hip belt of the Nanga Parbat model we used 4 types of top quality foams. Benefit: the perceived weight of the backpack is halved by transferring weight to the hips. The use of top quality materials is only half of the success. The rest of the work is thinking about every detail and constantly checking how our products are doing in action.

HIP BELT DIAGRAM BASED ON THE EXAMPLE OF NANGA PARBAT

- 1 Moisture removal and abrasion prevention
- 2 Preventing strain, ensuring comfort
- 3 EVA* foams of different densities to transfer the weight of the backpack to the hips
- 4 Additional stiffening

*Adapts perfectly to the hips. Highly resistant to deformation - unlike classic foams, which can deform after long use, losing their initial elasticity.

BIKING AND TOURIST BACKPACKS

The collection of urban tourist rucksacks is designed for lovers of short trips, walks and for those who like to feel at ease even while wandering around city streets.

AIR BRIDGE PRO

Do you spend a lot of time on two wheels? We have prepared modernised and varied bicycle backpacks for you. These backpacks are based on the AIR BRIDGE PRO support system. You bend the built-in frame into an arch, and this regulates the air supply and adjusts the back ventilation to your needs.

Photo by Michał Grzywacz

FREKI 25 SOLID
Colour: cherry/black, lagoon/black, graphite/black
Weight: 1200 g

Ideal for a short bicycle trip as well as a Saturday hike out of town. A new load-bearing system.

- adjustable **AIR BRIDGE PRO** support system
- adapted to the Hydration system
- hip belt and sternum strap
- front pocket with organizer and clip hook for keys
- flat pocket inside the backpack
- two mesh side pockets
- elastic band at the front
- haul handle
- compression straps with buckle (1 per side)
- rain cover hidden in the bottom of the backpack
- discrete reflective elements

Available also in:

GERANGER 30 SOLID
Colour: black/graphite, spring power/black
Weight: 760 g

A backpack for everyday use, both in town and during the weekend hike.

- soft and comfortable support system **SPONGE MAPPING SYSTEM**
- adapted to the Hydration system
- hip belt and sternum strap
- front pocket with organizer and clip hook for keys
- additional pocket at the top
- flat pocket inside the backpack
- two mesh side pockets
- elastic band at the front
- haul handle
- compression straps (2 per side)
- ice axe loops
- rain cover hidden in the bottom of the backpack
- discrete reflective elements

GERANGER 20 SOLID
Colour: lagoon/black, red/black
Weight: 630 g

Available also in:

RAGO 28 SOLID
Colour: black/black, lagoon/black
Weight: 720 g

A simple backpack, both for tourists and students. It will fit basic equipment for a change of weather, but also a laptop or textbooks.

- soft and comfortable support system **SPONGE MAPPING SYSTEM**
- hip belt and sternum strap with a whistle
- a pocket in the hip belt
- front compartment made of expandable mesh
- zippered front compartment, open pocket inside
- additional pocket at the top
- flat pocket inside the backpack
- two mesh side pockets
- haul handle
- compression straps with buckle (1 per side)
- ice axe loops
- reflective belt

RAGO 18 SOLID
Colour: cherry/black, spring power/graphite
Weight: 630 g

ORLAND 25
Colour: black
Weight: 850 g

A backpack that deserves to be called the best friend on the journey. It will never disappoint with the number of possible solutions to increase packaging capacity, but also with its durability.

- 2 chambers with convenient access and additional compartments
- heavy duty coil locks
- 2 front compartments
- 4 side drawstrings
- hip belt and sternum strap
- universal Velcro on the front
- comfortable strapping systems
- soft and comfortable support system **SPONGE MAPPING SYSTEM**

TOMTE 20
Colour: black, lagoon
Weight: 420 g

The lightest in the collection, a simple timeless design. Designed as an extra or emergency backpack that can be packed into its own flap.

- soft and comfortable **SPONGE MAPPING SYSTEM** with the possibility of removing the stiffening mat, which makes it possible to pack the backpack into its flap
- hip belt
- zippered flap with a clip hook for keys
- two mesh side pockets
- haul handle
- ice axe loops
- main chamber drawstring

KAGEN CITY 25
Colour: black
Weight: 510 g

Modernised version of the KAGEN 25 backpack.

- soft and comfortable support system **SPONGE MAPPING SYSTEM**
- laptop compartment with underside protection
- large main compartment
- front compartment with open pockets inside
- front pocket with organizer and pockets
- flat pocket inside the backpack
- two mesh side pockets
- two gear loops at the front
- haul handle
- reflective belt at the front

BACKPACK ACCESSORIES

On our website you will find a whole range of backpack accessories, covers in different sizes, buckles, straps and more. Check at www.fjordnansen.pl

Photo by Sandra Pek

MULTIBAG
Colour: black
Weight:

Tourist handbag. Thanks to its cleverly designed belts and straps system, it is the answer to the demands placed on hand luggage carried with the main rucksack. You will attach it as a small backpack with important items both in front and back of the backpack. You'll wear it as a hip bag or shoulder bag.

SILDA

Colour: red/black
Weight: 2900 g

A durable and comfortable carrier. Put your kid on your back and show them the mountain trails!

- load capacity 20 kg
- four-point child safety belts
- rail adjustment for user height
- three open mesh pockets
- a baggage compartment with a capacity of approx. 15 litres under the seat

SACKS, BAGS

TOLGA 40, 60, 90

TOLGA 40: 30 x 55 x 30 cm,
TOLGA 60: 31 x 68 x 31 cm,
TOLGA 90: 38 x 78 x 38 cm,

Practical and convenient transport bag. Wide main opening allows easy access to packed items. The handles have been profiled as backpack straps, so the bag is also comfortable to carry on your back.

- made of durable Cordura material
- external pocket
- two internal pockets
- big pocket in the flap
- reinforced bag bottom

KAJ BAG 5, 10, 30, 50, 70

Universal sack made of waterproof material. Includes a detachable belt.

Actual capacity (after three folds):
KAJ BAG 5 - 5 L
KAJ BAG 10 - 10 L
KAJ BAG 30 - 30 L
KAJ BAG 50 - 50 L
KAJ BAG 70 - 70 L

ADVENTURE BAG 30, 65

Practical bags made of waterproof material. Perfect for safe handling of dry things even during the worst downpour or, on the contrary, for transporting wet things such as wetsuits. They will be great for kayaking or motorcycle trips.

ADVENTURE BAG 30

It has a belt to be worn on the shoulder. Colour: orange
 Weight: 750 g
 Actual capacity (after three folds): 30L

ADVENTURE BAG 65

Thanks to specially designed straps you can carry it as a backpack. Colour: navy blue
 Weight: 970 g
 Actual capacity (after three folds): 65L

Like most of our projects, this one was born of pure need. While planning one of the next expeditions, we came to the conclusion that the market lacks a decent waterproof bag for a reasonable price. We asked some of our friends who use similar top brand products if there is anything they would like to change or improve in them. It turns out the list is long. The comments were mainly concerned with the lack of practical solutions for the load-bearing system (especially under heavy load the use became burdensome), or with the insufficient length of the chimney, which made it difficult to close the maximally filled bag. It was an obvious signal to us that we had to develop our own product. When designing, we paid a lot of attention to the braces, which had to be ergonomic and provide high comfort when carrying the bag on your back. We also wanted them to be integrated into the whole structure, so that there was no need to detach them when carrying the Adventure Bag as a classic shoulder bag or hand bag.

Of course, before the final version appeared, the bag had to undergo a number of tests. For over a year, the test specimen was regularly scrutinised during weekly freestyle kayaking trainings by our waterproofing specialist - Darek Staniszewski. It also accompanied him on more ambitious sports trips to the Alps and Czechia. The next versions also passed the practical exam during a canoeing expedition along the Vistula River (over 1000 km) organized by Przemysław Siudem and Stanisław Stanisław, as well as during winter surfing in Iceland with leading Polish surfer Krzysztof Jędrzejak.

Before we finally accepted the product, it went a long way from a drawing desk to exhaustive testing in battle conditions. Thanks to this, we can proudly announce that the Adventure Bag that we hand over to you is one of the best bags of this type on the market.

Most of our projects follow a similar path. They are the fruit of the hard work of many creative people who share their knowledge and experiences, contributing to the creation of something unique.

TRAMP LIGHT

Size: L
 120 x 60 cm
 Weight: 80 g
 Colour: herbal

Size: M
 90 x 40 cm
 Weight: 40 g
 Colour: herbal

An exceptionally light towel, folds to a small size. Dries 6 times faster than a regular cotton towel.

TRAMP

Size: L
 120 x 60 cm
 Weight: 160 g
 Colour: honey

Size: M
 90 x 40 cm
 Weight: 80 g
 Colour: honey

Quick-drying towel with a smooth texture. Made of hygroscopic synthetic fibre mixture. Its chemical composition creates an unfavourable environment for bacteria. It dries about 3 times faster than an ordinary cotton towel. It is packed in a breathable mesh bag with a drawstring.

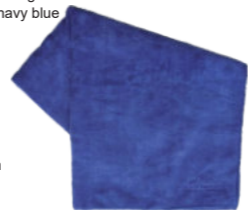

FROTA

Size: XL
 150 x 63 cm
 Weight: 290 g
 Colour: navy blue

Size: L
 120 x 60 cm
 Weight: 220 g
 Colour: navy blue

Quick-drying towel with the texture of a classic terry towel made of hygroscopic blend of artificial fibres. Its chemical composition creates an unfavourable environment for bacteria. It dries about 2 times faster than an ordinary cotton towel. It is packed in a breathable mesh bag with a drawstring.

VIKING TOWEL

A large beach towel for Fjord Nansen fans.

Material: cotton and microfibre
 Dimensions: 140 x 70 cm
 A large towel for everyday use. Very soft and absorbent. For those who are wild at heart.

GAVLE

Dimensions: 32 x 24 x 12 cm
 Colour: black
 Weight: 250 g

A spacious cosmetics bag. It has a large main compartment with partitions. In the flap from the inside - two small zippered mesh pockets and a roomy compartment as well as an external zippered pocket.

SENJA

Dimensions: 20 x 20 x 3 cm (closed)
 38 x 20 x 3 cm (open)
 Colour: cherry, lagoon
 Weight: 90 g
 A smaller cosmetics bag. Useful pockets inside. Zippered. Built-in hook for hanging.

FIRST AID KIT

Dimensions: 18 x 13 x 6 cm
 Colour: red
 Weight: 130 g
 Medicine bag. Does not include equipment.

LEKA

Dimensions: 13 x 30 cm
 Colour: cherry
 Weight: 40 g
 Waterproof pouch with detachable organizer, dimensions 15 x 24.5 cm. Does not include equipment.

TEMPERATURE TESTS OF OUR THERMOSES

In the ranking of the independent thermos' thermal tests carried out by mountain magazines (Alpin, NPM, Podróże, Magazyn Górski), the Independent Testing Group and the German product and service testing institute Stiftung Warentest, our thermos always rank 1st or 2nd in every capacity.

Attention: In our thermos, there is no need for preheating because they insulate perfectly from the moment of pouring.

HONER

Reliable, durable thermoses made in vacuum technology.
Capacity: 1 l / 0.7 l / 0.5 l
Weight: 290g / 410g / 500g

Time	0,5L*	0,7L*	1,0L
12h	72,3°C	76,0°C	79,2°C
24h	57,4°C	62,5°C	66,6°C

* results of independent NGT test

LANDO BLACK LANDO SILVER

Capacity: 0.45 l.
Weight: 330 g

A thermal mug equipped with a screw-n lid. With One Touch button. Perfect for camping. Bottom of the mug is fitted to car holders.

Time	Lando
1h	87,0°C
3h	75,0°C
6h	62,0°C
9h	53,0°C

VEL

Capacity: 0.5 l
Weight: 345 g

Thermos-cup with screw-on lid Universal for all kinds of meals and drinks. Dishwasher safe. The large diameter allows you to eat with a spoon.

Time	Vel
1h	83,0°C
3h	70,0°C
6h	55,0°C
9h	45,0°C

JACON CUP

Capacity: 0.4 l
Weight (cup+lid): 82 g

Ultra-light, titanium single cup with a lid with a capacity ideal for pouring a portion of freeze-dried food.

JACON SPORK

Weight: 20 g.
Ultra-light, titanium spoon-fork, i.e. spork.

TOLLA ALU 0,5 i 0,9

Tourist cutlery set. Pot and multifunctional lid/frying pan, made of anodized aluminum. Adapted for tourist burners, available in two sizes 0.5 L and 0.9 L. Designed to fit universal tourist gas cartridges:
- 0.5 L accommodates 100 ml cartridge + small burner
- 0.9 L will hold a 250 ml cartridge with a screwed-on burner or 450 ml cartridge alone

CLASSIC TRITAN BOTTLE

Tritanium bottle, 650 ml. It has a tight plug with a comfortable drinking funnel and a strainer. Ideal for drinks with temperature: -10 to 90 degrees C
Material: tritanium - safe, durable, and ecological. BPA free

BRANN

Capacity: 0.5 l
Weight: 130 g.

The return of the tourist classic. Single-walled steel cup with foldable handles.

VILL VIKING HIP FLASK 39,90zł

Capacity: 200 ml
Weight: 110 g

Steel flask with a printed image of a viking.

ACCESSORIES

ETNE

Dimensions: 12 x 8 cm
(unfolded 25 x 12 cm)
Colour: black
Weight: 60 g

Small, very practical wallet. It has lots of tabs and pockets. A zippered coin pocket.

VANGE

Dimensions: 9.5 x 15 cm
(25 x 12 cm when open)
Colour: black
Weight: 65 g

A practical wallet with many pockets. A zippered coin pocket.

ARLA

Dimensions: 12.5 x 17.5 cm
Colour: graphite
Weight: 45 g

Simple passport case.

TOBO

Dimensions: 13 x 19 cm
Colour: black
Weight: 120 g

A very advanced passport case. It has many compartments, zippered pockets, and a pen compartment. At the back, a special handle for attaching it to the belt.

HEROY

Dimensions: 15.5 x 10 cm
(18 x 15.5 cm when open)
Colour: black
Weight: 30 g

A wallet that can be fastened to the belt, a comfortable zippered pocket inside.

NECKY MINI

Dimensions: 17.5 x 12.5 x 5.5 cm
Colour: black
Weight: 155 g

A universal bag offering as many as nine pockets with different capacities and purposes. It can hold a lot of trinkets, documents, and you can hide your camera in the largest pocket. Equipped with detachable shoulder strap and belt clip.

Necky's bag was awarded the "Good Choice" title by the magazine PODRÓŻE.

STORD II

Colour: graphite
Weight: 150g

A simple and lightweight case for documents and cash. It has two zippered pockets. It's flat, so you can hide it under your clothes.

POTI

Colour: transparent/yellow

Waterproof case for documents, mobile phone or other very important things.
Sizes:
S - Weight: 20 g
M - Weight: 40 g

HUGLO

Dimensions: 37 x 15 x 10 cm,
Weight: 75 g

Hip satchel.
- 2 zippered compartments
- reinforced internal part
- 2 additional mesh compartments on the sides
- internal zippered safety pocket
- clip hook for keys

HUGLO MINI

Dimensions: 33 x 12 x 7 cm,
Weight: 75 g

Hip satchel.
- a zippered compartment
- zippered safety pocket
- clip hook for keys

MAGIC BELT II

Strap with hidden inner locker, zippered.

Dimensions: 4x120 cm
Colour: black
Weight: 70g

MAP CASE REGULAR

Dimensions: 19 x 30 cm
Colour: black
Weight: 150g
A map case. Detachable shoulder strap

APNE

Dimensions: 17.5 x 28 cm
(unfolded 35 x 28 cm)
Colour: black
Weight: 160g

With a pocket on the outside.

MERINO UNDERWEAR

Photo by Kamil Cisewski

The underwear is made of a combination of warm MERINO wool and fast-drying synthetic fibres and is based on Super Dry Dual technology. The material is very flexible, so it adapts perfectly to the body. The underwear is particularly suitable for autumn and winter use as it provides very good thermal protection. It is also very pleasant to the touch and does not irritate the skin. Thanks to the use of silver ions of Stop Bacteria technology, you don't have to deal with unpleasant smells, and your underwear stays fresh longer.

Fjord Nansen
MERINO WOOL

SCHOELLER - The Swiss company Schoeller Textil AG has been operating since 1961 and produces flexible materials of the highest quality, characterised by functionality, durability and strength. The wool produced by it and used in our products, obtained from Merino sheep is a high quality, very thin yarn, considered to be the best wool in the world. It has a low water absorption coefficient, does not irritate the skin, and naturally controls the drainage of moisture. In addition, it does not absorb odors and is naturally stretchable. It works well as a thermal insulation material.

THERMOACTIVE UNDERWEAR

HASVIK WIND MEN HASVIK WIND WOMEN

Colour: blue/navy melange/red, graphite melange/black

Material:
- Micropile Stretch
- Everest Nylon

Sports sweatshirt made of a combination of two excellent materials. Thermo-active Micropile Stretch and very durable Everest Nylon. It will find its application in all activities. It will provide excellent thermoregulation and air circulation and at the same time it will heat up and protect the body.

- adjustable hood
- two pockets with YKK zippers
- excellent air circulation
- durable nylon fabric on front panels

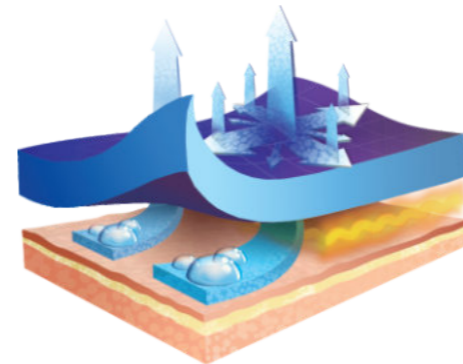

Photo by Anna Mika

MICROPILE® STRETCH MICROPILE STRETCH

The latest generation of knitted fabric made of modified polyester microfibres, the main advantage of which is very efficient and fast sweat removal. It can absorb twice as much sweat as other high-end materials (e.g. Super Dry Dual) while maintaining the right microclimate under the underwear. It is also twice as warm, making it ideal for autumn and winter. The process of sweat evaporation is supported by a special spatial structure of the fabric. Thanks to the right amount of Spandex fibres, the knit has a 4Way Stretch system - it stretches in four directions and, consequently, perfectly adapts to the figure. Thanks to the 3D material structure, the air retained in the material structure supports natural thermoregulation. The outer layer of the material is slightly wind resistant (denser weave), which is ideal for smaller wind.

THERMOACTIVE UNDERWEAR

Thermo-active, two-layer, latest generation autumn/spring underwear with the highest breathability properties. Thanks to the use of Stop Bacteria technology and the permanent placement of silver ions inside the fibre structure, we have also achieved a high level of hygiene, especially during long-term effort and use. Lack of side seams improves comfort and appearance of underwear and prevents underarm abrasions.

Are long shirt is a universal shirt designed to meet even extreme conditions head on. This was confirmed by Piotr Suchenia who was using it as the first layer during Polar Circle Marathon in Greenland, Antarctic Ice Marathon in Antarctica and Spitsbergen Marathon among others.

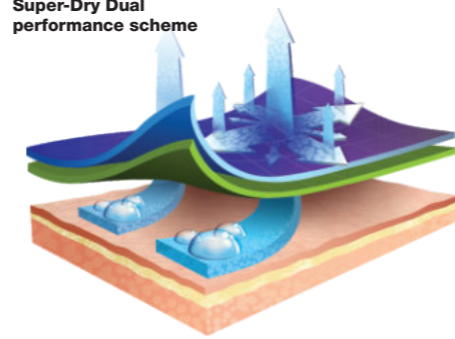

SUPER-DRY DUAL

Incredibly fast breathability of underwear from the series: Are/Akka and Merino were obtained by creating a very complex, 2-layer material:

The inner layer (hydrophobic) wicks moisture away from the skin, transporting it to the second layer. This leaves the first layer in a dry form, ensuring that the underwear keeps its thermal properties. The tests showed a few seconds' transport of water drops between the layers.

The outer layer (hydrophilic) sucks moisture from the first layer and distributes it on the outer surface, multiplying the drying surface and thus significantly shortening the evaporation time.

Super-Dry Dual performance scheme

SHIRTS

City shirts for active people. Thanks to the admixture of elastane, our T-shirts fit the body better, are slightly stretchable, do not crumple, and thus look good longer, especially when taken out of the backpack.

Print: Silkscreen printing

Material: Material: 95% cotton + 5% elastane, 180g/m².

This material has extremely low shrinkage parameters - below 6%, and significant resistance to colouring, which guarantees high quality. The production process of this material is in accordance with ISO PN-EN 9001-2001.

The knitwear is also compatible with Oeko-Tex® Standard 100 - Trustworthy textiles.

SOCKS

SOCKS

Like the rest of the products, our socks represent over 20 years of experience. The applied solutions are simple and proven, which is confirmed by our customers' opinions. In the process of designing socks, we pay the greatest attention to make them very comfortable, perfectly fitted to the foot, but also resistant to ruthless treatment on the go.

ANTI BUG SYSTEM

AntiBug System - the socks were sprayed with a special permethrine-based agent that repels mosquitoes, ticks, fleas and other insects. Effective protection has been confirmed by the Swiss Tropical and Public Health Institute certificate. The Repellent provides effectiveness for up to 30 washes.

YARNS USED IN OUR SOCKS

Coolmax® - fibres developed by DuPont. They ensure the drainage of moisture to the surface of the sock. This prevents the foot from overheating and provides a pleasant feeling of dryness.

Lykra® - a fibre with a "memory" that causes the sock to stick softly to the foot - thus increasing the feeling of comfort.

Amicor® - acrylic fibre with antibacterial properties, contains Irgasan - a formula preventing the growth of bacteria responsible for the unpleasant smell of sweat. Wool with Polyacrylate - Polyacrylate fibres are twisted together with wool to increase their mechanical durability. Thanks to this, the wool retains its properties for a long time (elasticity, feeling of softness, dryness and breathability of the skin).

Prolen® Siltex - a fibre with antibacterial properties, based on biogenic silver ions, inhibiting the growth of bacteria, fungi and moulds.

Kevlar® - The Kevlar fibers provide high durability of the sock in the most vulnerable areas, such as heels and toes. We use a specially developed blend with kevlar for strength, comfort and durability.

ANTI MOSQUITO

Socks with special impregnation to repel mosquitoes, ticks, fleas and other insects. Also available in children's size 31-34.

Colour: beige
Material:
- Cotton: 65 g
- Polyamid: 15%
- Polypropylene: 15%
- Elastane: 5%

HIKE KEVLAR ANTI MOSQUITO

High-rise socks reinforced with kevlar in places most at risk of wearing out. Contain antibacterial Amicor fibres and special impregnation to repel mosquitoes, ticks and other insects.

SOCKS WITH KEVLAR

We were one of the first in the industry to introduce such socks. After countless tests of mixtures we created socks which were appreciated in independent tests.

Summary of four-year sock tests:

Fjord Nansen Hike Kevlar socks are very good. For me, together with the other Kevlar models, they're basically perfect. Carefully designed and manufactured. Thanks to properly selected materials, they give certainty on long hikes. In fact, I have not seen socks that would withstand such intensive use without showing signs of significant wear.

JACKETS AND FLEECE JACKETS

CLIMASHIELD HEAT INSULATION

Climashield has been providing comprehensive thermal insulation solutions for over 25 years. This heat insulation is characterized by its technical parameters, strength, lightness and water resistance. After long-term use and repeated washing, it remains resilient and does not lose its properties. It breathes very well and wicks moisture away from the body. Additionally, it is fluffy and nice to the touch, it does not deform or tear.

IDUNN MEN
Colour: blue/black
Size L weight: 560 g

IDUNN WOMEN
Colour: blue/black
Size M weight: 530 g

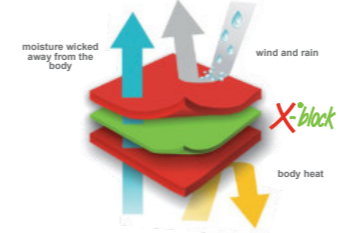

Jacket with 120g/m² Climashield filling and Everest Nylon outer material. Ultra-lightweight, ultra-strong ripstop nylon, finished with DWR impregnation. The lightweight softshell fabric inserts along your body will allow you to move unhindered and make you feel as if you are not wearing a jacket. Perfect for physical activity.

Sizes: XS - XXL

- fitted hood
- 2 side pockets with zippers
- thumbhole
- bottom drawstring
- draft tube under the main lock
- adjustable hood
- YKK zippers

X[®]-Block is an impervious, breathable material with a membrane. This jacket provides protection against strong wind and short, light rain. Thanks to the porous structure of the membrane, water vapour freely escapes to the outside of the material, effectively preventing the accumulation of excess moisture created during increased physical effort.

GOLFSTROM
Colour: black
Material: Softshell 4-way stretch, 100% polyester.

Stretchable and durable material with light polar insulation on the inside. Comfortable outer jacket with increased wind and rain resistance. The absence of a membrane inside makes the jacket well fitted to the body and provides excellent breathability, making it ideal for all activities but also for everyday.

- napoleon pocket
- 2 zipped side pockets that are easy to open and close with one hand
- velcro-adjustable cuffs
- adjustable collar with a drawstring
- waistband adjustment with a drawstring

STORM X-BLOCK
Colour: black, red/black
Material: X[®]-Block
Size L weight: 760 g

- Timeless classic. Sold since 2000!**
Years of experience beginning in scouting, continued during mountain hiking and canoeing resulted in the creation of an ideal fleece. Thick, impervious technical fleece, for lovers of extreme challenges. Be ready for any adventure in any weather conditions.
- underarm zipped ventilators
 - shoulder and elbow reinforcements
 - napoleon pocket
 - two zipped side pockets
 - zipper covered by a strip
 - collar with a drawstring
 - bottom drawstring
 - reliable YKK zippers

ROALD
Colour: red/black
black
Material: Micropile[®] Termic DWR
Size L weight: 665 g

A classic, warm fleece fabric. Thanks to the DWR (Durable Water Repellent) finish, it has increased resistance to the absorption of moisture from outside.

- shoulder and elbow reinforcements
- reliable YKK zippers
- upper zipper with a draft tube
- 2 side pockets with zippers
- napoleon pocket
- collar and bottom drawstrings
